Laboratory report

Enclosed you will find the results of your laboratory examination. In addition to your results you will also receive a brief summary of the correlating effects, regarding the tested parameters. These are compiled without any knowledge on the clinical background and as such, may only be used as an interpretation aid. In case of health problems, please consult a doctor or practitioner for medical treatment and accompaniment for making the best decisions for your health. We explicitly warn against beginning, suspending or changing any medication or therapy without consulting your doctor or practitioner.

Test: Estriol

Sample material: saliva

Analyte	Result	Reference range	Result
Estriol	4,3 pg/ml	Postmenopausal: 2,7-17 pg/ml Premenopausal: 2,1-13,3 pg/ml	

Estriol is a female sex hormone which is produced in the liver from estrone, a by-product of the estrogen metabolism. Estriol has a low metabolical activity and is the least damaging estrogen. It influences the function and growth of the female genitals as well as the bone development. Estriol is responsible for the preservation of all mucous membranes in women.

Yours sincerely
Your laboratory team
