John Smith  
Sample Street  
Anytown

**Surname,  
First name** Smith, John

**DOB** 01-01-1990

**Sex** male

**Laboratory #** 10000008

**Date collected** 01-01-2019

**Date received** 01-01-2019

**Report date** 03-01-2019

## Laboratory report

Enclosed you will find the results of your laboratory examination. In addition to your results you will also receive a brief summary of the correlating effects, regarding the tested parameters. These are compiled without any knowledge on the clinical background and as such, may only be used as an interpretation aid. In case of health problems, please consult a doctor or practitioner for medical treatment and accompaniment for making the best decisions for your health. We explicitly warn against beginning, suspending or changing any medication or therapy without consulting your doctor or practitioner.

**Test:** Cortisol Deficiency

**Sample material:** saliva

Analyte	Result	Reference range	Result
Cortisol (morning 0-1,5h)	6000 pg/ml	920-12900 pg/ml	

The morning cortisol level is within the normal range. Cortisol is a stress hormone which is produced in the adrenal cortex. Stress is the strongest stimulus for the cortisol distribution. Stress hormones are chemical messengers that help the body to react to extraordinary strain. Our body can not differentiate between positive and negative stress. Stressors include heavy physical labour, competitive sports, psychological and physical stress situations, serious illnesses but also positive events such as wedding preparations, new family members or a new job. It has an anti-inflammatory effect, stimulates the fat decomposition and increases the protein turnover. The cortisol distribution is subject to daily fluctuations.
