Surname, First name	Smith, John
DOB	01-01-1990
Sex	male
Laboratory #	20000001
Date collected	01-01-2019
Date received	02-01-2019
Report date	10-01-2019

Laboratory report

Enclosed you will find the results of your laboratory examination. In addition to your results you will also receive a brief summary of the correlating effects, regarding the tested parameters. These are compiled without any knowledge on the clinical background and as such, may only be used as an interpretation aid. In case of health problems, please consult a doctor or practitioner for medical treatment and accompaniment for making the best decisions for your health. We explicitly warn against beginning, suspending or changing any medication or therapy without consulting your doctor or practitioner.

Test: Helicobacter-pylori-antigen

Sample material: stool

Analyte	Result	Reference range	Result
Helicobacter pylori			
Helicobacter pylori antigen	positive	negative: <0.13 positive: > 0.17	

The detection of Helicobacter pylori antigen in stool indicates an infection with this germ. Helicobacter pylori is the most common chronic bacterial pathogen in humans. It lowers stomach acid levels while damaging the mucosal protection within the stomach. It has therefore been attributed with causing stomach and duodenal ulcers.

Yours sincerely,

Your laboratory team
